Final Exam

Reading and Listening Question Booklet

BACHELOR DEGREE – Year 1, Semester 1, 2022/23,

January 2023

Core English Communication and Academic Skills

TOTAL EXAM TIME ALLOWED: approximately 1 hour

This exam is worth 10% of your overall module grade.

Instructions to Candidates:

1. The recording includes the exam instructions, so listen carefully from the beginning until the end.
2. Do not open this booklet until you are instructed to do so.
3. Take notes in this booklet if necessary.
4. The recordings of the listening section will be played only **ONCE**.
5. Answer **ALL** questions. Select only **ONE** option for each question. Answers in the Reading and Listening Question Booklet **MUST** be transferred to the MCQ card.

All materials must be returned to the invigilator upon completion of the exam. Failure to do so will be deemed as **academic misconduct** according to the University policy.

This is a blank page.

SECTION A: READING

Reading 1

*You should spend about 20 minutes on **Questions 1-10**, based on Reading 1 below. Transfer all your answers to the MCQ card.*

I. The evolution of advertising has experienced some major milestones over the years. Most significantly, it has become much more personalised throughout history. Personalised advertising is the act of using information about customers to increase the attractiveness of an advertisement. The information can be as simple as human needs, geolocation and basic demographic information to the more specific ones such as a niche interest, buying intent, and even behavioural patterns.

II. Before TV and the internet, the limited number of media channels forced most brands to have a one-size-fits-all approach with their adverts. Although the very first signs of advertising are said to date back to the ancient Egyptians' carvings in 2000 BC, the first print advert was published in 1472 when William Caxton printed adverts for a book and put them on church doors in England. In 1704, the first newspaper advert was published in Boston. Sears was the first company to focus more on personalisation by advertising through direct mail. When they launched their massive direct mail campaign in 1892 with 8,000 postcards, it produced 2,000 new orders.

III. Then came the "Golden Age", where advertising became a whole movement when it came to radio and television. The first advert broadcasted on the radio was in 1922, in which the host delivered a 10-minute talk about the benefits of living a carefree life at the Hawthorne Court Apartments. The next milestone came on July 1, 1941, when the first legal advertisement was broadcasted on TV. The period between the 1960s and the late 1980s was a time of big ideas and huge personalisation. For example, many companies started building characters around their products to establish more of a connection between consumers and brands. The characters such as Tony the Tiger for Frosted Flakes and Pop gnomes for Rice Krispies are both still seen in the adverts for these cereals today. Despite the 1950s being tense for America during the Cold War, people started opening their wallets more as prosperity began to rise again.

IV. The next stage of targeted advertising began in 1992 with the advent of the internet. Advertisers shifted their attention to more online digital adverts, starting with a new form of advertisement on web pages called display advertising. This allowed a user to click on a link to the advertisement and immediately open a new web page, where the advertiser could try to sell their product to interested consumers. Display

advertising began with the very first banner adverts from the phone company AT&T in 1994. About 44% of people who viewed this first display advertisement clicked on it. The success of this advertisement form set off a chain reaction that altered the course of the advertising industry.

V. Then mobile advertising arrived as smartphones came into existence. The first mobile advertisement showed up in 2000 when a Finnish news provider sent free news headlines via SMS. This led to more experimental mobile adverts and mobile marketing initiatives. The launch of the App Store in 2008 with the iPhone 3 allowed advertisers to take advantage of mobile app adverts instead of mobile web browser adverts. Then, as technology advanced to include things like interactive gaming and GPS technology, mobile adverts started using these features for a more personalised and engaging user experience.

VI. Advertising has experienced many changes from the ancient Egyptian carvings to print adverts, to the Golden Age, to today. Highly-targeted and personalised online adverts are the only way to succeed in today's marketing world. Advertisers should show adverts and promote ideas that people want to see and hear. Because if people do not see content as an "advert", they will be more attracted to it, engage with the brand, and eventually buy.

Questions 1-4. Match paragraphs **II-V** with headings **A-H**. There are four extra headings.

Paragraph	**Heading**
	A. The impact of the internet on ad forms
	B. The advertising strategies of mobile devices
1. Paragraph II	**C.** The unexpected popularity of display advertising
2. Paragraph III	**D.** The influence of radios and TVs on advertising
3. Paragraph IV	**E.** The influence of the first print advert
4. Paragraph V	**F.** How mobile devices affect ad development
	G. The worldwide success of the Golden Age
	H. The initial development of advertising

Questions 5-10. Choose the correct letter **A**, **B**, **C** or **D according to the information in the text**.

5. Advertising personalisation is a strategy to _____.

A. improve the effectiveness of adverts

B. increase the relevance of the products

C. find out customers' personal information

D. reduce personnel costs when making adverts

6. The main purpose of mentioning Sears in **Paragraph II** is to _____.

A. give an example of using mail for advertising

B. compare mail adverts with newspapers adverts

C. emphasise the effectiveness of targeted adverts

D. describe how printed adverts worked at that time

7. Which of the following statements is **TRUE** about the "Golden Age"?

A. TV and radio broadcasting was common back then.

B. TV and radio adverts helped create brand characters.

C. The radio adverts were less engaging than the TV ones.

D. The TV and radio adverts attracted Americans to spend more.

8. Display advertising became successful because _____.

A. the advertisers noticed its strengths

B. there was sufficient space on webpages

C. banner adverts attracted most online visitors

D. the internet allowed people to access its content

9. In **Paragraph V**, the App Store is mentioned because _____.

A. it was a huge achievement for iPhone 3

B. it was a good example of mobile app advertising

C. it provided a platform for advertising in applications

D. it contained application adverts for gaming and GPS

10. Choose the best title for the text:

A. How to make successful advertisements

B. The development of personalised adverts

C. An introduction to the targeted advertising

D. The importance of advertising in the history

Reading 2

*You should spend about 20 minutes on **Questions 11-20**, based on Reading 2 below. Transfer all your answers to the MCQ card.*

I. "Genetic tests" refers to the analysis of human DNA, RNA, chromosome or proteins for detecting abnormal features that may have been passed down in the family's genes. The tests can be used for three things: first, directly examine the DNA or RNA that make up a gene (direct testing); secondly, examine the protein products of genes (biochemical testing); and finally, examine the entire chromosome, which contains genes that can determine a person's characteristics.

II. Before conducting genetic testing, doctors need to be aware of the difference between clinical tests and "research only" tests **[1]**. Clinical tests are performed by laboratories with government-approved CLIA (Clinical Laboratory Improvement Amendments of 1998) certification **[2]**. These laboratories can charge a fee and report results for use in patient care **[3]**. The costs of research testing are paid by the investigators, and the results are not shared with the patients **[4]**. Research laboratories may not perform a test if the participant does not meet the requirements of the research project.

III. A number of testing companies can check the genes for problems associated with certain health conditions, as well as family ancestry. However, the usefulness of such testing is uncertain. For some people, the effectiveness is obvious. When performed accurately, genetic tests can uncover a disease or a tendency to develop certain conditions. Knowing the possibility of having a health issue can help direct medical care and inform life decisions or encourage other family members to consider genetic counselling. In these cases, preventive measures or treatment can be lifesaving.

IV. Here are four examples of typical genetic testing. One common test is for hemochromatosis. This is a condition in which too much iron is absorbed from the diet. The extra iron can harm important organs like the heart and liver, even in people who exercise regularly and eat a healthy diet. Once a person is diagnosed, treatment and avoiding iron supplements can prevent serious conditions such as diabetes and liver failure. Another typical genetic test is called prenatal testing. For people planning a pregnancy or who are already pregnant, genetic testing is available to check for an extensive number of conditions, such as Down syndrome. Thirdly, another typical test is for detecting cancers. A number of genes are known to increase the risk of certain cancers. Testing may be especially important for people with a family history of these cancers. Perhaps the most well-known are BRCA mutations, which

increase the risk of breast, ovarian, and several other types of cancer. _____ _____. For instance, a person who is adopted or has no information about family medical problems may learn they are at increased risk of a disease, such as heart disease or cancer.

V. Nevertheless, the effectiveness of genetic testing can also be very limited. Results of genetic testing may provide information that the patient already knows, which may be unhelpful or even misleading. For example, testing could reveal that the patient has a genetic mutation that rarely causes any health problems. Learning that you have this mutation may not be helpful - though **it** might alarm you. Or, learning you are at increased risk for developing Alzheimer's disease late in life may be more upsetting than useful, _____ there are currently no reliably effective preventive treatments.

VI. It is true that a person cannot pick his or her genes, but thanks to an ever-expanding menu of options, people can pick their tests. In many cases, it is best to review the decision of taking genetic testing with the doctor before having it done. You may choose to see a genetic counsellor about the consequences of testing before doing the testing rather than ordering it yourself. In the end, you may decide the best plan is no testing at all.

Questions 11-20. Choose the correct letter **A, B, C** or **D according to the information in the text**.

11. According to **Paragraph I**, which is **NOT** the function of genetic tests?

A. Examine DNA and detect potential disorders.

B. Test the proteins produced by specific genes.

C. Solve problems with the DNA or RNA in genes.

D. Identify the genes that may cause inherited disorders.

12. Choose the best location in **Paragraph II** for the following sentence:

By contrast, laboratories that only perform research testing are not required to have CLIA approval.

A. After sentence 1

B. After sentence 2

C. After sentence 3

D. After sentence 4

13. What is the main difference between clinical tests and research tests?

A. The accuracy of the tests is different.

B. The money is paid by different people.

C. The level of test difficulty is different.

D. The benefits to the government are different.

14. The main purpose of **paragraph III** is to _____.

A. explain why genetic testing might be useful

B. encourage the readers to have their genes tested

C. make the readers aware of possible genetic problems

D. point out that many companies can offer genetic testing

15. Which of the following statements is **TRUE** about hemochromatosis?

A. It is the result of an unhealthy diet with too much iron.

B. It can be treated by taking iron-free nutrition supplements.

C. It is caused by damage to organs such as the heart and liver.

D. It is a common disease that can be detected by genetic testing.

16. Choose the best sentence to fill in the blank in **Paragraph IV**.

A. The fourth type of testing is for people who do not know their family's medical history.

B. Fourth, genetic testing could be helpful for people to find their lost children or relatives.

C. The last typical genetic testing can cater for the needs of understanding a family's history.

D. Lastly, genetic testing is useful for people with a family history of heart disease and cancer.

17. Choose the best linker to fill in the blank in **Paragraph V**.

A. so

B. as

C. yet

D. but

18. Which phrase can replace the pronoun ***it*** in **Paragraph V?**

A. the risk

B. the gene

C. the mutation

D. the information

19. Which of the following statements is correct?

A. Alzheimer's patients can be helped by genetic testing.

B. Genetic testing may be useful when the results are accurate.

C. Doctors can use genetic testing to check the health of newborns.

D. Research testing can enable patients to identify genetic problems.

20. What is the author's attitude towards genetic testing?

A. Positive

B. Negative

C. Neutral

D. Cautious

SECTION B: LISTENING

Listening 1

Questions 21-26. Listen to a short lecture and use the words in the box (**A-I**) to complete the summary (lecture parts one and two) below.

Lecture Part One

A. 1800	**B.** length	**C.** architecture
D. archaeology	**E.** 4,300	**F.** maths
G. 4000	**H.** speed	**I.** movements

Brief history of Babylon

- Start of the city: **21.** _____ years ago.
- Location: present-day Iraq along the Euphrates River.
- Babylonian Empire: a large kingdom ~ fell apart after the King's death.
- Neo-Babylonian Empire: peak time for arts and **22.** _____.

Study of the universe

- Recorded the **23.** _____ of stars and planets.
- Found the position of Jupiter.

Lecture Part Two

A. on the roof	**B.** power	**C.** linguistic unity
D. unknown	**E.** the Bible	**F.** belief
G. differences	**H.** language differences	**I.** in the palace

Hanging Gardens of Babylon

- One of the Seven Wonders of the World.
- Location: **24.** _____.

The Tower of Babel

- Tallest building in the city.
- Purpose of the story: to explain **25.** _____.
- The reason for punishment: to maintain religious **26.** _____.

Listening 2

Questions 27-29. Choose the correct letter **A, B,** or **C according to the information in the conversation**.

27. Designing an app helps a business _____.

- **A.** create a new brand profile
- **B.** improve sales to phone users
- **C.** access more potential customers

28. An app provides extra value to customers by _____.

- **A.** allowing them to order more products
- **B.** making them feel more comfortable and respected
- **C.** improving communication speed with customer support

29. What kind of data does the app company need approval from the user?

- **A.** Where the user is.
- **B.** What the user searches for.
- **C.** What content the user consumes.

Questions 30-33. Complete the flowchart below. Choose **four** answers from the box and write the correct letter **A-H**. There are four extra options.

How to design an app

A. attractive	**B.** interface	**C.** functions	**D.** requirements
E. useful	**F.** sketches	**G.** parts	**H.** measures

Conduct market research on other apps

↓

Examine the **30.** _____ of other apps and compare them to your own

↓

Record the **31**. _____ for your design team

↓

Ensure the app is **32**. _____ and easy to navigate

↓

This step considers the three **33**. _____ of the MVC paradigm

Listening 3

Questions 34-40. Choose the correct letter **A, B or C** according to the information in the lecture.

34. This lecture mainly talks about _____.

A. the dangers faced by African sea turtles

B. the challenges and protection for sea turtles

C. the importance of sea turtles to the ecosystem

35. Why do female sea turtles lay eggs on the beaches?

A. To find the right hatching condition.

B. To get more plants and animals to eat.

C. To experience the temperature difference.

36. For sea turtles, what is the danger of being a bycatch?

A. They'll be captured and sold with the fish.

B. They'll be trapped and killed due to air shortage.

C. They'll be caught and sent to universities for research.

37. How did the lighting devices decrease sea turtle bycatch?

A. By lighting the fishing equipment to attract other fishes.

B. By covering a range of light wave lengths to avoid sea turtles.

C. By giving out light wave lengths that only sea turtles can see.

38. LED lights lowered the number of turtles accidentally caught by _____.

A. 60%

B. 20%

C. 52%

39. Which country runs an education programme for sea turtle conservation?

A. Australia

B. Costa Rica

C. Mexico

40. What's the speaker's attitude to sea turtle protection?

A. Neutral

B. Optimistic

C. Pessimistic

Transfer ALL ANSWERS to the MCQ card.
